

Hritika Sharma

Data Analyst • Power BI • Excel • SQL • Python

Mississauga, ON | (437) 985-8133 | hrisharma2002@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst and Computer Science graduate with hands-on experience analyzing research and operational datasets using SQL, Power BI, Excel, Python, and Pandas. Experienced in data cleaning and validation, exploratory analysis, KPI reporting, dashboard development, and investigating data-quality issues. Built end-to-end analytics projects involving datasets ranging from hundreds of thousands to millions of records.

TECHNICAL SKILLS

Data Analytics: SQL, Excel, Python, Pandas, NumPy, Exploratory Data Analysis, Statistical Analysis

BI & Visualization: Power BI, Power Query, DAX, Dashboard Development, KPI Reporting, Matplotlib

Data Management: PostgreSQL, MySQL, Data Cleaning, Data Validation, Data Preparation, Relational Databases

Tools: Git/GitHub, Jupyter Notebook, pgAdmin, VS Code

EXPERIENCE

Research Assistant | Algoma University

Ontario, Canada | May 2025 – September 2026

- Cleaned, validated and analyzed research datasets and human-assessed annotation data using Python and Pandas.
- Investigated missing data, inconsistencies, unexpected results, and patterns across experimental outputs.
- Compared evaluation metrics and analyzed human preference data for speech-recognition research.
- Built reproducible data-processing workflows and documented methodology, quality checks, analytical findings, and results.

IT Intern | Innovation Ghar Nepal

Kathmandu, Nepal | Jun 2021 – Feb 2022

- Supported computer systems, hardware, software, and technical workshop environments.
- Troubleshooted technical issues and assisted with system configuration and user support.
- Created technical documentation and instructional materials for technology workshops.

RESEARCH & PUBLICATION

Rethinking Human-Aligned Evaluation: An Analysis of Semantic Metrics Beyond WER

First Author | arXiv Preprint | 2026 | [\[View Paper\]](#)

- Conducted human-aligned speech-recognition evaluation using human-assessed data, Python-based analysis, data validation, and metric comparison.

PROJECTS

Toronto 311 Service Request Analysis | SQL • PostgreSQL • Power BI • Python

- Analyzed 500,000+ Toronto 311 service requests through an end-to-end analytics workflow.
- Repaired and validated 36,189 malformed records while preserving all 500,269 rows.
- Built PostgreSQL staging and analytical workflows using SQL CTEs, window functions, ranking, and views.
- Analyzed service demand by month, division, request type, ward, and status and built a two-page Power BI dashboard for operational reporting.

Toronto Bike Share 2025 Analysis | Python • Pandas • Matplotlib

- Analyzed 7.8M+ trips across 12 months to investigate seasonality, rider behavior, trip duration, and station usage.
- Compared Member and Casual rider patterns and identified weekday commuting and weekend usage trends.
- Performed data-quality validation, including investigation of DST-related time discrepancies.

Sales & Operations Performance Dashboard | Power BI • Power Query • DAX • Excel

- Cleaned and transformed Canadian sales and operations data using Power Query.
- Developed DAX measures and KPI reporting for revenue, profit, profit margin, order volume, and on-time delivery.
- Built an interactive dashboard analyzing monthly trends, regional and product performance, customer segments, and delivery operations.

EDUCATION

Bachelor of Science (Honours), Computer Science

Algoma University | Brampton, ON | 2026
